## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-2, 4-6, and 8-12 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Yamashita et al., U.S. Patent Application Publication No. 2002/0002930. See Example 8 and Example 2 (which describes the makeup of the dispersion used in Example 8).

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yamashita et al., U.S. Patent Application Publication No. 2002/0002930. The structure of the silicone polyoxyethylene adduct is not revealed. Nevertheless, the skilled artisan will appreciate that this class of materials, oft used in the formulation of inks and other aqueous compositions for their surface active properties, always take on the structure of a graft copolymer where an alkylene bridge exists between the oxyalkylene chain and

Application/Control Number: 10/748,110 Page 3

the siloxane backbone by virtue of the usual synthetic method employed in their preparation, i.e. hydrosilylation of an alkenyl group-terminated polyether with an organohydrogensiloxane.

## Allowable Subject Matter

Claim 7 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The compositions taught by Yamashita et al. are devoid of dispersing resins and one of ordinary skill would not be motivated to add one to arrive at the instant invention for the reason that the pigments used in their invention are self-dispersing.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marc S. Zimmer whose telephone number is 571-272-1096. The examiner can normally be reached on Monday-Friday 8:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Randy Gulakowski can be reached on 571-272-1302. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
